

V1.0.0-beta

daily
programming
bytes

Concept

Program Structures

Controlling the flow of program in your Python code

Concept

Conditions

Iterations

Functions

// dPB

Conditional blocks

- Can be used to write a logic
- Code that executes when logic is accepted
- Edge-cases, when the logic is not accepted

Loops

- Repeating a set of operations
- Known ranges vs unknown ranges
- Skipping operations

Functions

- Reusable code
- Unitary placement
- Configurable via arguments
- Heavily used in object-oriented code

Demo

daily programming bytes

Thanks
